English Players are well equipped for a variety of missions. There are two beams of energy, each firing at a different angle, available to the warrior. Each beam fires independently, but as long as both beams are active, the warrior can fire in any direction. Energy also provides a smaller blast that can be thrown out to damage enemies. This is a manual throw, so the player must hold down the trigger while he throws it, although it can be fired while “overflow”, or “spillover” is on. If the player fires while overflow is on, the energy will be distributed to a larger blast, similar to energy bursts. Energy can be upgraded by gaining points, either by destroying an enemy item or capturing a base. There are four different energy types. The player can choose any three and activate the fourth. Each type provides a different power level, allowing more powerful attacks, but also higher chance of draining energy while attacks are being fired. Throughout the game, energy will build up as the player progresses through the missions. As energy builds, players will unlock new moves and abilities. The player can start with a large amount of energy, but as energy is used, it will reduce. There is a lot of variety in the missions. There are no strait-forward kill-or-be-killed affairs like in previous games. The missions are all situations where the player needs to use a specific technique. The environment is varied as well, allowing players to interact with a diverse variety of items. Items include lockpicks, maps, clues, money, and weapons.

Sometimes items will be hidden throughout the world, allowing the player to discover them. Players can spend money to purchase new weapons and equipment. There are four main weapon types. Each has its own primary attack, but they can also be equipped with specialized equipment. For instance, the plasma rifle can be equipped with a scope, allowing the player to see enemy positions. Items can also be captured, which not only allows the player to gain additional points, but also allows them to obtain a weapon of the same type as the one they currently have. Players can also interact with the environment to affect the game world. There are four different types of environmental effects. These can include 82157476af
